

Integrating Your Systems and the Cloud

Cloud Integration Services, specialising in Enterprise Application Integration (EAI) was set up to assist SME/SMB businesses, realise an IT architecture that is able to achieve specific real time process integration between its applications; thus providing end-to-end automated business processes and data flows.

Cloud Infrastructure

CIS own, maintain, protect and support our core hosting infrastructure as part of this level of control and associated security guarantee. The vSphere controlled ESXi Server configured infrastructure is both owned and self managed. All access' including "root" access are under CIS control and via 3 tiered levels of security access controls. With our fully redundant and failover systems we can guarantee Uptime of "Five nines" (99.999%)

Systems Integration

We review the business requirements on an individual basis and capitalise on the options available through the use of application programming interfaces (APIs) which is expanding rapidly because legacy application integration strategies fit business needs within the client-server world, but fails to meet today's need for real-time, distributed cloud and mobile applications.

Managing your data and systems securely

Cloud Integration Services utilise best practices across Development, Support and Hosting services (with Git Versioning control as standard) to ensure the resilience and security of the applications, their access and the data contained therein.

PROVIDING TAILORED SOLUTIONS ACROSS INDUSTRY SECTORS

- Business Process Analysis and Management – consulting, development and support
- End-to-end integration services using Open Source Integration Platforms and API's
- Integration architecture design, advisement and consulting
- Integration development, migration and consolidation
- Integration hosting services for both integrated applications, business critical applications and development (on CIS owned and managed infrastructure)
- Integration governance and management services
- Integration application support and maintenance

WE HAVE SO FAR WORKED WITH ALL OF THESE SOFTWARE PACKAGES

Please get in touch with us by way of any of the contact details shown at the top of this page for more information or to discuss your requirements with which we hope to assist you.
